

"THE SEELEVEL". A method and apparatus for monitoring the changing levels of fluid in an enclosed tank. (an intelligent dip stick)

Abstract

A simple, inexpensive, non-mechanical apparatus for monitoring the fluid level in an enclosed tank (without requiring access to the bottom of the tank). Visual display of the level is on a bar-graph and digital data available on a connector for process control if required. The fluid level may be displayed in "% Full", Gallons, Feet or what ever units are appropriate.
